The New York City Veterinarian

December, 2017 Volume 58, No. 4

President's Message

Final greetings! As this year along with my presidency is coming to a close, I would like to thank all of you for attending our monthly meetings and our Annual Awards party. Sincere gratitude extends to the executive board for devoting their time and efforts each month as well as to Linda and Scott in the executive office for their dedication to our organization. And of course, a big thank you to all our sponsors for their support of our

continuing education program and to this association.

In 2017 the VMA upheld a stronger presence in the community. We completed a successful program introducing veterinary medicine to high school and college students, attended career days at high schools, tabled at the Meet the Breeds event, provided support for the Pride March, and provided scholarship awards to high school students. We look forward to continuing and furthering this work into the New Year ahead.

I invite each of you to consider becoming more involved in our association. We always welcome new faces with fresh perspectives to join us at the executive board meetings. It is a rewarding experience to become involved in your local chapter and learn about animal related government bills, state level updates, and locally relevant issues as well as join us at local events in the community.

As of November 25, 2017 NY Save has providing funds to help save the lives of 46 dogs and cats, for a total of \$51,864.55. An additional two more cases have been approved. The range of payments for each case has ranged from \$373.73 for a dog that was hit by a car, and up to \$2,000, which is the maximum payout.

The variety of medical issues is striking, and have included a puppy who jumped from his owner's arms and broke both front legs, an elderly dog with a bleeding spleen, a dog hit by a car, and a cat who fell from a window in a high rise building. See some of the faces or the cases below.

Partners in Practice (PIP) Comprehensive Clinical Conferences

Provide several hours of comprehensive review and updates of important and contemporary topics in veterinary medicine. Upon completion, participants should gain enhanced knowledge of the selected topic.

Partners in Practice (PIP) Practical Clinical Workshops

Designed to promote sound diagnosis and effective therapies.

Blue Pearl Veterinary Partners

Continuing Education lectures are free and open to all area veterinarians. Registration is required and is done by sending an email to Dr. David Wohlstadter at david.wohlstadter@bluepearlvet.com. Dinner begins at 7:00 pm and the lectures begin at 7:30 pm. BluePearl is approved as a New York State sponsor of CE. Unless otherwise noted, lecturers are given in Queens then Manhattan and then Brooklyn at the addresses listed below.

Brooklyn

32 4th Avenue (at Pacific Street)

Brooklyn, NY 11217

Queens

107-28 71st Road

(between Austin St. & Queens Blvd)

HELPING PUPPIES AND KITTENS TOLERATE MEDICAL HANDLING

E'lise M. Christiensen DVM, DACVB Behavior Vets of NYC Ph 646-661-1001 www.behaviorvets.com info@behaviorvets.com

A THANK YOU!

Thanks for your support of Behavior Vets in all our forms over the last 12 years. It's been a pleasure to get to know all of you and an honor to support you with your patients.

BEHAVIORALLY HEALTHY CARE

Today, I want to update you on some quick references regarding behaviorally healthy care at home and in the hospital. As you are probably aware, Fear FreeTM care and Sophia Yin's Low Stress Handling and Restraint practices are becoming more accessible to the public, dog trainers, groomers, and anyone interested in animals. If you are not already feeling the pressure, it's coming! Or perhaps you were ahead of the curve and are all over this already. Either way, I hope you will find this article helpful.

There are training plans for clients included. Please feel free to share this article with the families you support.

INTRO

It's no secret that many clients avoid the veterinary clinic because of the distress they feel imagining the fear they will put their animal through at the vet. People aren't dumb. Many (not all) can easily identify the fear and panic their furry family members face at the hospital. In fact, many veterinarians put off medical care for their own animals for the same reasons!

Thankfully, the combination of at-home implementation and in-clinic low stress handling early in the pediatric/juvenile period maximizes an animal's chances for appropriate medical care throughout his/her life. This means clients will be more comfortable coming back to see us and complying with recommendations. And in the long term, this means healthier, happier families.

Effective, efficient options for low stress handling in the veterinary clinic are easy to implement once veterinarians and staff decide to do so. These therapies don't require more time than regular examination plans, and will make your day more fun as well as bond pets and clients to your practice. In addition, these therapies help patients improve from visit to visit, rather than decompensate from visit to visit which is common.

IN THE HOSPITAL

There are many resources these days for decreasing stress during medical care. Below you will find a summary and algorithm to help guide you through the process.

Principles of low stress handling and restraint should be implemented with all animals, and especially our pediatric and juvenile patients. Animals of any age who seem "happy" or "fine" need as much attention as all the other patients. Keeping them happy and comfortable or shifting them from "fine" to "fearless" is critical to helping them tolerate further care. Negative experiences set them up for a lifetime of behavioral pathology in the hospital and in their homes. What you do for even 3 seconds at the veterinary clinic can have life-threatening, long-term consequences for each animal's behavior.

The good news is, it's not hard to manage patients well once you start working on it and you have the communication systems in place to support your efforts.

Dive in on these, if you haven't yet...

There are many ways to decrease fear, anxiety, and stress in patients. Start with easy interventions.

For instance, all patients who can be given food and generally like food should get very, very tasty treats for essentially most of the visit. It wouldn't be wrong to have a patient receive 30-50 treats from the time they come in the door to the time they leave the hospital. Remember, treats should be of appropriate size (1 lick of anything liquid or pasty or 1 piece of food that is less than ¼ in diameter or smaller, if possible). For instance, a tiny sliver of a bonito flake would be appropriate as one treat for a cat. Half of a bonito flake would still be plenty, even for a large breed dog.

Animals who are generally eager to eat, but stop eating in the hospital are stressed.

Play light classical music, make sure you have solid, warm surfaces for patients, and keep your body language neutral. Never label an animal mean or any number of other derogatory terms. These creatures are in crisis. They are fighting for their lives as far as they can tell. Be kind, considerate, and open to changing plans as needed.

The algorithm for low stress handling is a great tool to keep the practice team on track (http://veterinarymedicine.dvm360.com/low-stress-handling-algorithm-key-happier-visits-and-healthier-pets).

AT-HOME TRAINING

Important medical handling behaviors include (but aren't limited to):

- -Mat Training
- -Chin Rest (in hand, on lap, or on object)
- -Taking pills
- -Ear Handling
- -Nail Trimming/Foot Handling
- -Allowing Injections
- -Tooth Brushing

Each of these behaviors can be trained through desensitization and counter-conditioning, classical conditioning, and/or through operant (teaching the patient to do something specific to obtain a reward) therapy.

When these techniques are combined, patients can learn quickly to not only tolerate, but enjoy most medical handling.

Basic tips to keep in mind:

- -Don't increase the difficulty of a game/training activity until the patient has had AT LEAST THREE successful repetitions at the current level.
- -Back up at least 2 steps if species-specific signs of agitation are noted.
- -Intersperse easy, fun, and previously learned cues throughout training to keep the patient relaxed and feeling successful.
- -Keep training sessions short enough that the patient is always interested in doing more when you stop. Nothing good comes from training too long
- -If an animal elects to stop training, allow this choice 100% of the time. Start easier next time and stay at the easier steps longer. Forcing an animal to participate will backfire.
- -Go SLOWLY. It doesn't take long to train these behaviors in most patients. But it will take forever if you go too quickly through a training game plan because there will be too many mistakes. This will cause frustration and even fear.

For more information on body language and teaching animals to tolerate medical handling see the following resources:

www.fearfreepets.com
www.drsophiayin.com
http://abtconcepts.com/training-videos/

Special Mat Training: 5 reps/day

- -Get out special mat (mat should be comfortable/easy to stand on and have ample traction on both sides- slippery is the enemy here)
- -Keep grooming and medical tools within the animal's sight during these sessions, but do not manipulate them during these sessions.
- -Feed meals from puzzle toys on it
- -Reward pet for going to mat
- -Over time reward pet for staying on the mat
- -This behavior can be easily trained using an automated food dispenser with a training program, such as a Treat and Train.
- -These 5 reps are separate from any other behavioral therapies done using the mat as "base."

Chin Rest: 5 reps/day

- -Choose where the pet will rest his/her chin (the TARGET), options include a towel on a lap, an object, or a hand.
- -Keep grooming and medical tools within the animal's sight during these sessions, but do not manipulate them during these sessions.
- -Present target
- -Mark exactly when the behavior happens (say "yes" or use a clicker) and reinforce any approaches to the target
- -Eventually, only mark when the chin hits the target, then when the chin rests on the target, and then when the animal will hold his/her head on the target for gradually increasing durations.
- -At this point, additional handling can be added intermittently (pill taking, ear handling, foot handling, voluntary injections, etc.).

Taking Pills 5 reps EOD:

- -After training the special mat behavior this can be started.
- -Give pet treats in pill gun on the special mat.
- -Give pet tasty liquid on the special mat.
- -Practice "Three Treat" game: Take 3 soft treats, the first treat is a blank, the second treat is filled with a piece of crunchy kibble or an empty pill capsule and quickly follows the first, the third treat is a blank and quickly follows the second. In this way, the pet gets used to getting treats in quick succession. The goal of this activity is for the pet to be very excited about getting the treats as quickly as possible so that the next treat is always being anticipated and the treat in the mouth is ignored in favor of the new one. Every day the treat containing the crunchy should vary.
- -Pilling and giving liquid medications can be helped by pairing them with a previously learned and enjoyed chin rest behavior (see above).

Ear Handling 5 reps EOD

- -Teach the chin rest (see above).
- -Have all medical items in sight of the patient.
- -Lift the ear, give a treat within 1-2 seconds.
- -When animal is comfortable with 3 reps of this in a row, go to the next step.
- -Put a finger inside, give a treat within 1-2 seconds.
- -When animal is comfortable with 3 reps of this in a row, go to the next step.
- -Move the finger around inside the ear, give a treat within 1-2 seconds.
- -When animal is comfortable with 3 reps of this in a row, go to the next step.
- -Lift other ear, repeat.-When this is going well, add shaking a bottle of ear wash just before ear handling.
- -Eventually, you can add put a small amount of ear wash on a cotton ball or squirting it in the ear, rub it around, and give a treat within 1-2 seconds. Each of these is a separate step.

Foot Handling: 5 reps EOD

The following video demonstrates basic desensitization and counterconditioning to nail trims in an aggressive dog. This plan should be proactively followed for all puppies, even if they are not growling, snarling, snapping, biting, stiffening, or showing other signs of agitation.

https://drsophiayin.com/videos/entry/training a dog to enjoy toenail trims/

The following picture and write up demonstrates basic desensitization and counterconditioning for nail trims in a cat.

https://drsophiayin.com/blog/entry/the-case-of-finn-the-cat-whos-afraid-of-toenail-trims-and-the-vet/

Voluntary Injections: 5 reps EOD

- -Send pet to the special mat.
- -Present chin rest target.
- -When patient is resting chin on target, rub/tent injection areas. Pick a different area for each rep. Some options include femoral regions, paraspinal regions, shoulder areas, and "scruff" area. Give a treat within 1-2 seconds of each rep.
- -When the animal is comfortable with rubbing/tenting of these areas, the protocol can be escalated to poking a finger gently in the tented skin and eventually to poking the skin with different items (pen, pencil, chop stick, and eventually a capped syringe, and then a syringe with a needle). The ultimate step up would be injection of saline into the tented area.
- -The goal here is to help the animal be comfortable with a variety of sensations along with the skin tent.

Tooth Brushing: 5 reps EOD

- -Obtain a brushing implement
- -Classically condition the brush by showing the brush, then giving a treat within 1-2 seconds, remove the brush immediately from sight.
- -Repeat until patient is eagerly looking from brush to the owner expectantly.
- -Then continue the process by gradually placing the brush closer and closer to the pet's teeth.
- -When that's going well, you can teach the chin rest behavior, if not done already and progress from there.

Owners do not need to work on each of these activities every day. They can split the work on these behaviors into MWF behaviors (do mat training, chin rest, pilling, foot handling, and tooth brush conditioning MWF) and TR (do mat training, chin rest, vaccination prep, and ear handling behaviors TR). They can take the weekend off, and they will still get great results.

SUMMARY

When both family members and veterinary teams work together to prepare puppies and kittens for examinations as well as to make trips to the veterinary clinic fun and enjoyable, these patients will stay in your practice longer and make their families happier. And importantly, the patients will be happier and so will you.

If you're struggling with a patient, reach out to a Behavior Vet. We are honored to support your work.

I'm looking forward to seeing animals who love their vets as the norm in our field. And I bet you are, too.

CLASSIFIEDS

VETERINARIANS AVAILABLE

Full or Part-Time. Veterinarian seeks work at small animal practice in New York City. NY licensed. Contact Eduarda Krieger, DVM at 917-239-3377.

Part-Time or Relief. Veterinarian available in NYC. Please contact drmartinvet@gmail.com.

FOR SALE OR RENT

Staten Island. Established single doctor small animal veterinary practice for sale in Staten Island, NY 10314. Owner is retiring. Call during the day 718-982-1640

East Village animal hospital with space to rent out to a veterinarian. We have a large commercial 3000 square foot space that is operating and approved for small animal veterinary medicine and surgery in the East Village. Our animal hospital is fully equipped for surgery, x-ray, dentistry, and also contains a pharmacy and pet food shop. We're looking for someone to rent part of our space as we have only two veterinarians and there is space to share. This would be especially useful for a board certified veterinarian looking to build a practice around their specialty and build a clientele base in the East Village as well as veterinarians with mobile clinics who seek a home base. We are happy to discuss different ideas and exchange cases that might be mutually beneficial. Rent will be reasonable and dependent on the number of hours/ space required. If interested, please send your CV and details of what you are interested in to: veterinar-ianinquiry@gmail.com.

VMA of NYC

The mission of the Veterinary Medical Association of New York City is:

To improve and advance the education of veterinarians and the science of veterinary medicine; to foster and maintain high standards of integrity, honor, courtesy and ethics in the profession; to foster protection of the public health, and enlighten and inform the public in regard to veterinary medicine, science, knowledge and the avoidance of cruelty to animals, wherein it affects the public good and welfare.
